SPRINT 3 -*Creating a IOT device using esp32 and notify user when the medicine time arrives.*

1.DEVICE SETUP

The device consists of ESP32 which is used for connecting with the ibm cloud r to publish and subscribe data. The LED glows when the medicine time arrives. The LCD displays the medicine name and the buzzer rings.

CODE:

```
#include <WiFi.h> //library for wifi
#include <PubSubClient.h> //library for MQTT
#define LED 5
#include <LiquidCrystal_I2C.h>
```

```

3. MEDICINE DATABASE

The screenshot shows the IBM Cloud IoT Platform Data Explorer interface. On the left is a sidebar with navigation icons. The main area displays a table of documents. The table has columns for document ID, payload, and socket ID. The data is as follows:

4. WORKING

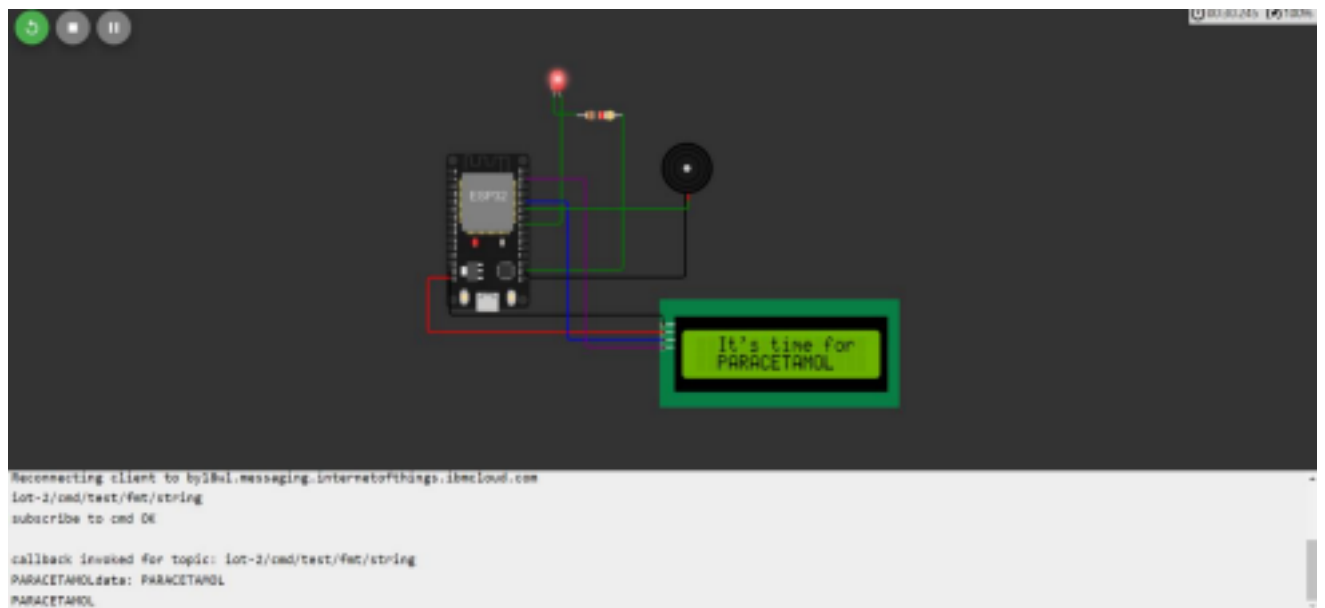

When the medicine time arrives the node-red flow sends DEVICE COMMAND to the IBM IOT platform. ESP32 which has subscribed to the IBM IOT platform turns the LED and displays the medicine name on the LCD display on receiving the command.

• ADDING MEDICINE

The screenshot shows a web form titled "MedicineData". It contains the following fields and buttons:

- Medicine Name: PARACETAMOL
- Medicine data(MM-MM-DD): 2022-11-17
- Medicine time(MMSS): 1804
- Buttons: ADD, RESET, LOGOUT

- When the medicine time arrives the LED in the device glows, LCD displays the medicine name and buzzer rings.

DEVELOPMENT IN SPRINT 4: In Sprint 4, text to speech service will be implemented in the IOT device and Mobile app to monitor and control the medicine schedule will be implemented.
